

Medrio RTSM

Fast, flexible, and fully in
your control.

Medrio RTSM delivers randomization and trial supply management without the complexity of custom systems. Designed for speed and adaptability, our no-code platform lets you configure your RTSM in weeks, not months. Get trials started faster and keep them on track.

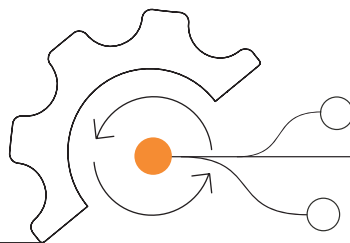

Eliminate guesswork and ensure investigational products reach the right participants at the right time. Reduce delays and waste while improving oversight. Medrio RTSM removes bias, streamlines accountability and reconciliation, and enhances incident management.

Integration with Medrio CDMS/EDC ensures real-time data sharing and oversight. Whether you're focused on maximizing speed, flexibility, or efficiency, Medrio RTSM keeps you in control.

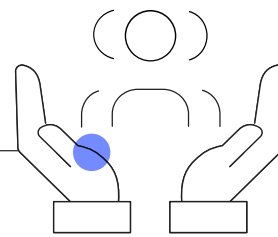

Speed

Accelerate timelines.
Deploy in 4-5 weeks and
complete mid-study
updates in 1 week or less.

Flexibility

Adapt with ease. Align
to complex protocols
without rigid constraints
or custom code.

Support

Work with confidence.
Receive guidance from
consultative Medrio
experts.

Participant Management

Streamline the participant management process for study teams. With Medrio RTSM, you can easily confirm participant eligibility, maintain balanced cohorts, and distribute dosing instructions and schedules.

Randomization

From simple to block to adaptive, Medrio RTSM is capable of supporting a wide range of randomization types and complexities. Replacing manual randomization methods with technology guarantees that your study data is bias-free.

Supply Chain Management

Have visibility into the complete product journey, from initial receipt through eventual return and destruction. Our easy-to-use interface enables you to efficiently view and manage inventory levels at the site and depot levels.

Supply Chain Optimization

Plan early to optimize your supply chain with a coordinated, patient-focused dispensing strategy. Align manufacturing, packaging, labeling, and demand-driven logistics. When reflected in your Medrio RTSM configuration, you can ensure efficient inventory use and minimize waste.

Ready to learn more?

medrio

You've shown dedication, collaboration, and leadership throughout the process of getting the RTSM service up and ready for [first patient enrolled] FPI. Kudos to your team. I know we are grateful, and you've earned our trust and respect"

– Rare disease biopharma

PARTICIPANT MANAGEMENT

- Automate dosing and allocating instructions for site staff
- Capture visit details, demographic data, and inclusion/exclusion criteria
- Manage cohort assignments

RANDOMIZATION

- Automate randomization assignments with audit-ready documentation
- Track randomization progress with confirmatory emails and real-time reports
- Support a broad range of randomization methods

SUPPLY CHAIN MANAGEMENT

- Receive shipment, inventory, stock level, and dispatch alerts
- Automate expiry date management, low shipment notifications, and site resupply orders
- Enforce temperature logging and excursion notifications
