Medrio eTMF

powered by Engility®

Always inspection-ready

Medrio eTMF, powered by Engility®, is the compliance solution that connects directly to Medrio EDC and CTMS. You can automate document filing, track completeness in real time, and maintain a single inspection-ready trial master file from day one through closeout.

Continuous Readiness

Maintain inspection readiness. Automatically track missing documents and expiry dates.

Unified Workflow

Reduce duplication and automate document routing by sharing data between Medrio eTMF and CTMS.

Auditor-Friendly Access

Streamline inspections and meet regulatory obligations by providing selective access to external auditors.

Automated Regulatory Compliance

Manual filing leads to missing documents and audit findings. Medrio eTMF standardizes and automates the entire filing process. A consistent document structure reduces compliance risk and ensures your trial master file stays complete, accurate, and inspection-ready.

Seamless CTMS & EDC Integration

You can eliminate data silos with clear integrations. Medrio connects documents to CTMS workflows and study processes. Automation for monitoring, enrollment, payments, and quality oversight streamlines trail and document management.

Secure Collaboration

A secure cloud environment improves collaboration between sponsors, CROs, and sites. Medrio adapts to your operating model with enterprise-grade security and role-based permissions to protect sensitive study data at every stage.

"The intuitiveness of the system was a game-changer. Compared to our old platform, the user experience was vastly improved, and that meant faster onboarding, smoother processes, and less friction across our studies."
