

Medrio Offline Data Capture

Streamline clinical trials with fast, secure offline data capture that maximizes site efficiency.

Medrio Offline Data Capture is the tablet app that acts as an extension of Medrio EDC when users can't access a stable internet connection. Forms load in seconds, and data stays encrypted on the device until you can sync back to Medrio EDC.

You can download exactly which forms you need via the app before going offline, so you aren't stuck waiting for a full sync. When mismatches happen during offline data entry, Medrio Offline Data Capture flags them right away, ensuring your data is always accurate. The app is available for multiple operating systems and connects directly to Medrio EDC once you're back online.

Efficient

Forms open in seconds, not minutes, so sites can work without delay.

Proactive

Partial download abilities and automatic conflict flags mean a lost connection doesn't cause data loss.

Secure

Data is encrypted on the device, with PII and PHI protection, from the moment it's entered.

medrio

Uninterrupted data collection

Keep studies moving forward with an app that allows you to pre-download the data you need and automatically flags conflicts, like timezone mismatches. Reliable offline capture with online EDC sync reduces manual reconciliation, speeds up entry, and protects data integrity.

Accelerated site workflows

Empower site teams with the ability to pre-download necessary forms. Even when offline, data loads in seconds, improving site satisfaction. Spending less time waiting lets teams in locations without a reliable connection focus on participants, not technology.

Uncompromising data protection

Protect sensitive trial information with device-level encryption that safeguards data, including PII and PHI, while offline. Encrypted storage prevents unauthorized access, ensures regulatory compliance, and keeps data secure until syncing with Medrio EDC.

AVAILABLE FOR

Android

iOS

iOS

CAPTURE DATA

- In the field
- At sites with limited connectivity
- During home health encounters
- When satellite connectivity fails
- Anywhere connectivity is unreliable
